

# 4 steps to ensure clean and healthy water

## Step one

Close the valve which connects the main pipeline with the tank. Then, draw the water from the tank.

## Step two

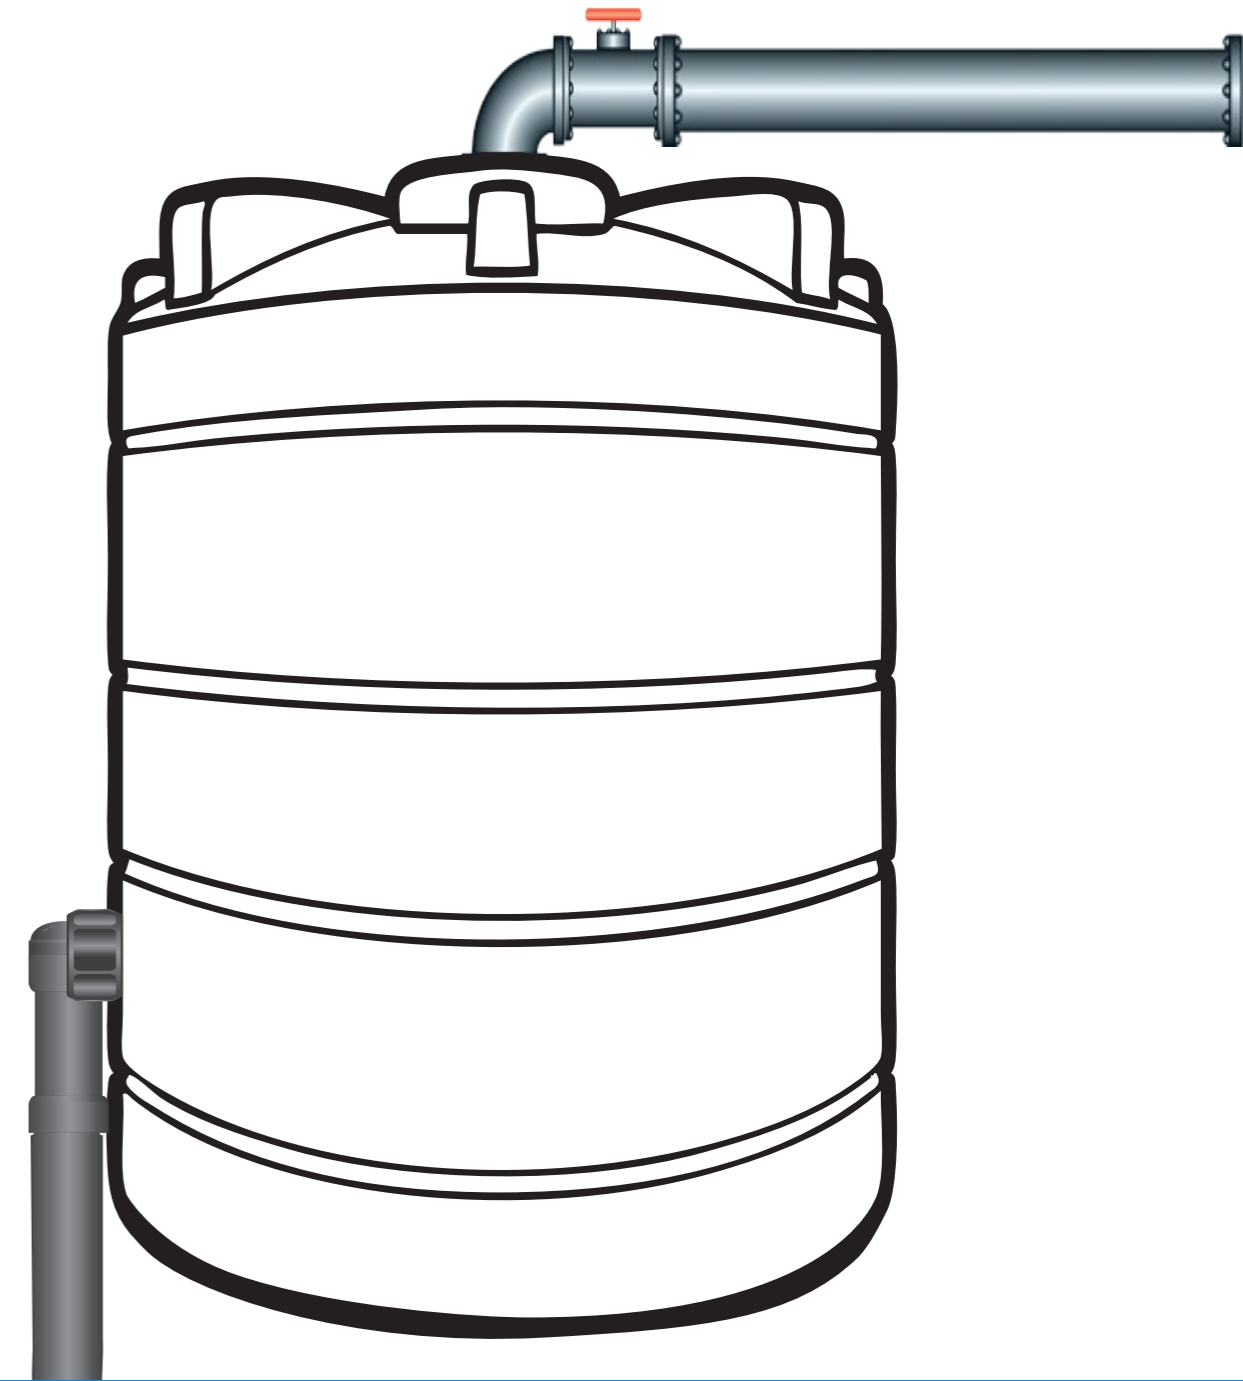

Use sterilized brush to clean the tank's walls and bottom from dust and settlings.

## Step three

Sterilize the tank by using chlorine.  
Use one liter of chlorine/ cubic meter of water.

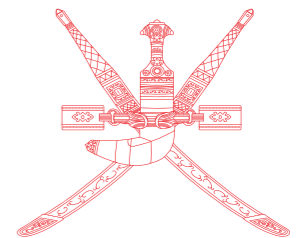

## Step Four

Fill the tank with clean water, draw the water again into Drairage network to get rid of the chlorine and settlings; and refill the tank with clean water.
